

The dccpaper bundle: Classes for submissions to IJDC and IDCC

Alex Ball
University of Bath

Abstract

This is the documentation for the [dccpaper](#) bundle, consisting of the following classes:

- `ijdc-v9`, which corresponds to the template used by the International Journal of Digital Curation, beginning with volume 9.
- `idcc`, which corresponds to the template used for the International Digital Curation Conference, beginning with IDCC15.

The version to which it relates is v1.6, last revised 2017-10-20.

The code for this bundle is maintained at <https://github.com/DigitalCurationCentre/dccpaper>.

Versions of the templates are also available that target Microsoft Word and LibreOffice/OpenOffice.org.

Please note that the DOI attached to this document is fake and should not be used for identification purposes.

Received 4 July 2013 | Revision received 10 December 2013 | Accepted 1 January 2014

The *International Journal of Digital Curation* is an international journal committed to scholarly excellence and dedicated to the advancement of digital curation across a wide range of sectors. The IJDC is published by the University of Edinburgh on behalf of the Digital Curation Centre. ISSN: 1746-8256. URL: <http://www.ijdc.net/>

Copyright rests with the authors. This work is released under a Creative Commons Attribution 4.0 International Licence. For details please see <http://creativecommons.org/licenses/by/4.0/>

Introduction

The \LaTeX class `ijdc-v9` produces camera-ready papers and articles suitable for inclusion in the International Journal of Digital Curation, with applicability from volume 9 onwards. The similar `idcc` class can be used for submissions to the International Digital Curation Conference, beginning with the 2015 conference. This document explains how to use these classes.

Dependencies

Certain aspects of the template design have been implemented using third-party packages, aside from those that are required parts of the \LaTeX system. Therefore you should ensure that you have these packages installed on your system before attempting to use the class.

- `atbegshi` is used for switching geometry between pages.
- Tables in your document must be formatted according to the design principles promoted and supported by the `booktabs` package.
- `caption` is used to format the figure and table captions.
- `etoolbox` is used behind the scenes for patching commands.
- `footmisc` is used to format the footnotes.
- `titlesec` is used to format the section headings.

In some cases the class prefers to use packages that are not part of the base installation (but are nevertheless commonly available in \TeX distributions), but will fall back to their base equivalents if necessary.

- `newtx` will be used if available in place of `times`.
- `xcolor` will be used if available in place of `color`.

For referencing, you are encouraged to use either `biblatex` using the styles provided by `biblatex-apa` (preferred), or `apacite`.

Loading the Classes

International Journal of Digital Curation

The class is loaded in the usual way with `\documentclass[<options>]{ijdc-v9}`. The following options are available:

`paper` Use this for peer-reviewed papers.

`article` Use this for general (non-peer-reviewed) articles if you like, but you do not have to as the class defaults to this state.

`editorial` Use this for an editorial.

International Digital Curation Conference

The class is loaded in the usual way with `\documentclass[⟨options⟩]{idcc}`. Two types of option are available. The first relates to the type of submission:

`research` Use this for full research papers.

`practice` Use this for extended abstracts of practice papers, and full practice papers.
The class defaults to this state, making this option even more optional than normal.

`data` Use this for data paper abstracts and full data papers.

`poster` Use this for poster abstracts.

`demo` Use this for demonstration proposals.

`bof` Use this for Birds of a Feather session abstracts.

`workshop` Use this for workshop proposals.

The second type of option relates to the conference to which the submission will be made:

`15` Use this for the 2015 conference.

`17` Use this for the 2017 conference.

`16` Use this for the 2016 conference.

`18` Use this for the 2018 conference.

Preamble Commands

The following commands should be given in the preamble to fill out the document metadata.

The following command should be used in all submissions.

`\title[⟨name⟩]{⟨full version⟩}` The long version of the title is shown on the cover page of the submission, while the short version appears in the (even page) headers.

The following commands should be given in general articles and IDCC submissions. They should *not* be given in peer-reviewed IJDC papers until after the peer review process is complete.

`\author{⟨name⟩}` The name of one author. Repeat the command for each additional author.

It is customary in IJDC and IDCC papers to group authors by institution. Within each institution, the authors are ordered by the level of contribution (or alphabetically where this is equal), and the institutional groups are ordered by the level of contribution of the first author in the group (or alphabetically by first author where this is equal). A different convention may be used if appropriate.

`\affil{⟨name⟩}` The affiliation (institution, company) of the immediately preceding author(s). This command may be repeated as necessary.

`\correspondence{<name, postal address.> Email: \email{<email address>}}`

Name, address and email address of the corresponding author. This information appears in the footer of the cover page.

If an IJDC submission is a reworked conference paper (that has not already been formally published), for reasons of transparency the name of the conference should be given.

`\conference{<name of conference>}` The conference at which the earlier version of the paper was presented, e.g. ‘the 10th International Digital Curation Conference’.

For IDCC papers, authors are invited to record the date on which they made their submission.

`\submitted{<date>}` The date on which the initial submission was made to the conference by the authors.

Some additional commands are used by the editorial team when preparing a submission for publication. Though authors would not normally need to use them, here they are for completeness.

`\received{<date>}` The date on which the initial submission was received by the editorial team (IJDC papers only).

`\revised{<date>}` The date on which the latest revision was received by the editorial team.

`\accepted{<date>}` The date on which the submission was accepted for publication.

`\subno{<number>}` The submission number allocated by the IJDC Open Journal System.

`\volume{<number>}` The number of the IJDC volume in which the submission will be published.

`\issue{<number>}` The number of the IJDC issue in which the submission will be published.

`\date{<year>}` The year in which the submission will be published.

Document Body

When it comes to writing the body of the submission, the template should allow you to use the usual \LaTeX markup without much adaptation. So, for example, you would start as in Figure 1.

Please note that if submitting an abstract or proposal to the IDCC instead of a full paper, you should *not* use the `abstract` environment. Instead, start with a section headed ‘Abstract’ as in Figure 2. Further guidance on how to write such submissions is given on the conference website.

IJDC and IDCC papers follow the formatting conventions specified by the American Psychological Association (APA, 2010), with a few minor changes. There are some instances where this affects how you write your submission.

```

\begin{document}
\maketitle

\begin{abstract}
Text of the abstract\dots
\end{abstract}

\section{Introduction}

The text of the introduction starts here\dots

```

Figure 1. Sample code for the beginning of an IJDC submission or IDCC full paper.

```

\begin{document}
\maketitle

\section{Abstract}

The text of the abstract or proposal starts here\dots

```

Figure 2. Sample code for the beginning of an IDCC abstract or proposal.

Headings

Five levels of heading are defined (`\section` down to `\subparagraph`) but most authors only need the first one or two levels. `\section` and `\subsection` headings should be written in title case, that is, with Each Significant Word Given an Initial Capital, while the remaining headers should be written in sentence case as if running text. Do not end your heading names with full stops/periods.

Quotations

Quotations should be put in a quote environment, wrapped in inverted commas, with the citation placed in parentheses at the end.

‘Cras porttitor dictum lacus. Class aptent taciti sociosqu ad litora torquent per conubia nostra, per inceptos hymenaeos. In consectetur, diam at volutpat elementum, libero lectus pulvinar sem.’ (Borgman, 2007)

Tables

- Table text should be in the `\small` font size.
- Tables should not use vertical lines to separate columns, and ideally should not use horizontal lines to separate rows in the body of the table; white space and text alignment should be sufficient. The top and bottom rules should be drawn with

`\toprule` and `\bottomrule` respectively, with other rules drawn with `\midrule` or `\cmidrule`. See the documentation of the `booktabs` package for more information.

- Text in the body of tables should normally be left-aligned. Numeric data should be aligned at the decimal point among itself but centred with respect to the heading; the D column type from the `dccolumn` package and the S column type from the `siunitx` package are particularly useful for this.
- Where decked (subdivided) headings are used, there should be a border beneath the upper-level heading (column spanner) indicating to which of the lower-level headings it applies.
- Empty cells can either be left blank or represented by an em dash. A blank cell indicates non-applicability, while an em dash signifies that the data was not collected or has been omitted.
- Captions should end in a full stop/period.

Table 1 demonstrates these features. The code used to produce the table is shown in Figure 3 (note that the `dccolumn` package was loaded in the preamble).

Table 1. Papers and articles published in the IJDC in 2008 and 2009.

Issue	Frequency		Percentage	
	Peer-reviewed	General	Peer-reviewed	General
3(1)	9	7	56.3	43.8
3(2)	5	7	41.7	58.3
4(1)	10	4	71.4	28.6
4(2)	8	6	57.1	42.9
4(3)	3	15	16.7	83.3

Note the different relative positions of the table and figure captions.

Reference List and Citations

To use `biblatex` for your reference list, add the following to your preamble:

```
\usepackage[style=apa]{biblatex}
\addbibresource{<bib file>.bib}
\DeclareLanguageMapping{british}{british-apa}
```

and include `\printbibliography` at the end of the document.

To use `apacite` for your reference list, add the following to your preamble:

```
\usepackage{apacite}
\bibliographystyle{apacite}
```

and include `\bibliography{<bib file>}` at the end of the document.

```

\begin{table}
\caption{Papers and articles published in the IJDC in 2008 and 2009.}
\label{tab:issues}
\centering\small
\begin{tabular}{lD..{2.0}D..{2.0}D..{2.1}D..{2.1}}
\toprule
& \multicolumn{2}{c}{Frequency} & \multicolumn{2}{c}{Percentage} \\
\cmidrule(lr){2-3}\cmidrule(1){4-5}
Issue
& \multicolumn{1}{c}{Peer-reviewed} & \multicolumn{1}{c}{General} \\
& \multicolumn{1}{c}{Peer-reviewed} & \multicolumn{1}{c}{General} \\
\midrule
3(1) & 9 & 7 & 56.3 & 43.8 \\
3(2) & 5 & 7 & 41.7 & 58.3 \\
4(1) & 10 & 4 & 71.4 & 28.6 \\
4(2) & 8 & 6 & 57.1 & 42.9 \\
4(3) & 3 & 15 & 16.7 & 83.3 \\
\bottomrule
\end{tabular}
\end{table}

```

Figure 3. Code used to typeset Table 1.

In-text citations are given parenthetically in author–date format. If author forms part of the narrative, as with Rinaldo, Warnement, Baione, Kalfatovic and Fraser (2011), only the date is added in parenthesis, otherwise both author and date are given (Smith et al., 2003). Where multiple citations are given at once, the order should be the same as in the reference list, i.e. alphabetically by author, with co-authored works coming after singly-authored works, then chronologically (Borgman, Wallis & Enyedy, 2006; Digital Curation Centre, 2005; Mazairac & Beetz, *in press*; Santini, 2004a, 2004b; Smith et al., 2003; Witten & Frank, 2005). Please consult the documentation of the package you are using for how to achieve this.

Please do not cite entire websites through the reference list mechanism. Instead, provide the title of the website (in English) and the URL in a footnote.¹ If the title of the website is not clear from the visible pages, the contents of the HTML title element may be used. Other explanatory notes, whether about the body text or cited items, should also be given as footnotes rather than as endnotes or reference list annotations.²

Please provide digital object identifiers (DOIs) for referenced items where available.

The data underlying the results presented in the submission should be placed in an appropriate custodial environment and cited (Waterton, Watson & Norton, 2013), with the reference placed in the reference list. The *biblatex-apa* package provides a data entry type which should be used for datasets; the *entrysubtype* value should be ‘Data set’ or similar. If using *apacite*, use the *misc* entry type with a type value of ‘Data set’ or similar.

Appendix A: Change History

- v1.6** 2017-10-20
Added details of IDCC 2018. Allowed files to be unpacked by \TeX without compiling. Refactored some documentation commands for efficiency.
- v1.5** 2016-08-05
Added details of IDCC 2017. Slightly refactored code to convert dccpaper-base.tex into a package, dccpaper-base.sty.
- v1.4.1** 2015-06-22
Fixed bug preventing compilation in DVI mode.
- v1.4** 2015-05-22
Added details of IDCC 2016. Improved whitespace handling. Fixed bug triggered by demo option. Fixed missing use of `\Authfont`. Added missing DOI tweak for [biblatex-apa](#).
- v1.3.2** 2015-01-21
Removed dependence on user supplying a title. Fixed bug triggered by numbered sections.
- v1.3.1** 2014-10-14
Fixed typographical error relating to details of IDCC 2015.
- v1.3** 2014-08-07
Added documentation of `\conference` command. Improved display of footnotes, footnote markers and itemize/enumerate lists. Fixed a bug in the handling of author information. Fixed and improved how the transition from first to subsequent page geometry is achieved. Updated the details of IDCC 2015.
- v1.2** 2014-04-11
Added implementation, installation and licence sections to the Appendix of the documentation. Moved the majority of the file postamble information to the README, and synchronized the latter with the GitHub version. Improved the adaptation of [apacite](#) referencing to the house style.
- v1.1** 2014-03-06
Refactored the source for distribution through CTAN, and to allow the addition of the idcc class.
- v1.0** 2013-12-18
First public release of ijdc-v9 class.

Appendix B: Implementation

ijdc-v9.cls

The type of paper is recorded in `\dccp@type`. The possible values are ‘General Article’, ‘Peer-Reviewed Paper’, or ‘Editorial’. The latter is provided through the constant `\dccp@editorial` so we can test for it later with ease.

```
21 \def\dccp@type{General Article}
22 \def\dccp@editorial{Editorial}
```

These three options set `\dccp@type` appropriately. The `editorial` option additionally switches page numbers to roman numerals. The `article` option is redundant, but included for symmetry with `paper`.

```
23 \DeclareOption{editorial}{\let\dccp@type=\dccp@editorial%
24   \AtBeginDocument{% Editorials use Roman numerals for page numbers
25     \pagenumbering{roman}%
26     \renewcommand{\thelastpage}{\@roman\c@lastpage}%
27   }%
28 }
29 \DeclareOption{paper}{\def\dccp@type{Peer-Reviewed Paper}}
30 \DeclareOption{article}{\def\dccp@type{General Article}}
31 \ProcessOptions\relax
```

These definitions are used to fill out the headers and footers. They include some details that are defined in `dccpaper-base` and provided by the user: `\thedate`, `\thevolume`, `\theissue`, `\thelastpage`, `\thedoi`.

```
33 \def\dccp@publ@long{International Journal of Digital Curation}
34 \def\dccp@publ@short{IJDC}
35 \def\dccp@publ@msg{The \emph{\dccp@publ@long} is an international journal
36 committed to scholarly excellence and dedicated to the advancement of digital
37 curation across a wide range of sectors. The \dccp@publ@short\ is published by
38 the University of Edinburgh on behalf of the Digital Curation Centre. ISSN:
39 1746-8256. URL: \url{http://www.ijdc.net/}}
40 \def\dccp@titlefoot@bib{%
41   \dccp@publ@long\\
42   \thedate, Vol.\ \thevolume, Iss.\ \theissue, \thepage--\thelastpage.%
43 }
44 \def\dccp@titlefoot@doi{%
45   \url{http://dx.doi.org/\thedoi}\\
46   DOI: \thedoi
47 }
48 \def\dccp@normhead@doi{doi:\thedoi}
```

`\dccp@subject` will be used for the PDF subject, and will specify the journal and the issue.

```
49 \def\dccp@subject{\dccp@publ@long, \thedate, Vol.\ \thevolume, Iss.\ \theissue}
```

The class is based on the `article` class, and uses A4 paper.

```
51 \LoadClass[a4paper,12pt,twoside]{article}
```

The rest of the formatting happens in the following file.

```
53 \usepackage{dccpaper-base}
```

idcc.cls

These definitions are used to fill out the headers and footers. The ones for `\dccp@publ@short` and `\dccp@publ@msg` are a fallback, defined here but ordinarily overridden using a package option.

```
21 \def\dccp@publ@long{International Digital Curation Conference}
22 \def\dccp@publ@short{IDCC}
23 \def\dccp@publ@msg{The \dccp@publ@long\ takes place on [TBC] in [TBC]. URL:
24 \url{http://www.dcc.ac.uk/events/international-digital-curation-conference-idcc}}
```

`\dccp@subject` will be used for the PDF subject. The value here is again a fallback, ordinarily overridden using a package option.

```
25 \def\dccp@subject{\dccp@publ@long}
```

Paper type is recorded in `\dccp@type`. The values can be ‘Research Paper’, ‘Practice Paper’, ‘Poster’, ‘Demonstration’, or ‘Workshop’.

```
27 \def\dccp@type{Practice Paper}
```

These options set the value of `\dccp@type` appropriately. The `practice` option is redundant, but included for symmetry.

```
28 \DeclareOption{research}{\def\dccp@type{Research Paper}}
29 \DeclareOption{data}{\def\dccp@type{Data Paper}}
30 \DeclareOption{poster}{\def\dccp@type{Poster}}
31 \DeclareOption{demo}{\def\dccp@type{Demonstration}}
32 \DeclareOption{bof}{\def\dccp@type{Birds of a Feather}}
33 \DeclareOption{workshop}{\def\dccp@type{Workshop}}
34 \DeclareOption{practice}{\def\dccp@type{Practice Paper}}
```

The details for each conference are slightly different, so they each have an associated option for overriding the fallback definitions for `\dccp@publ@short`, `\dccp@publ@msg` and `\dccp@subject`.

```
35 \DeclareOption{15}{%
36   \def\dccp@publ@short{IDCC15}
37   \def\dccp@publ@msg{The 10th \dccp@publ@long\ takes place on 9--12 February
38   2015 in London. URL: \url{http://www.dcc.ac.uk/events/idcc15/}}
39   \def\dccp@subject{10th \dccp@publ@long, 2015}
```

```

40 }
41 \DeclareOption{16}{%
42   \def\dccp@publ@short{IDCC16}
43   \def\dccp@publ@msg{The 11th \dccp@publ@long\ takes place on 22--25 February
44     2016 in Amsterdam. URL: \url{http://www.dcc.ac.uk/events/idcc16/}}
45   \def\dccp@subject{11th \dccp@publ@long, 2016}
46 }
47 \DeclareOption{17}{%
48   \def\dccp@publ@short{IDCC17}
49   \def\dccp@publ@msg{The 12th \dccp@publ@long\ takes place on 20--23 February
50     2017 in Edinburgh. URL: \url{http://www.dcc.ac.uk/events/idcc17/}}
51   \def\dccp@subject{12th \dccp@publ@long, 2017}
52 }
53 \DeclareOption{18}{%
54   \def\dccp@publ@short{IDCC18}
55   \def\dccp@publ@msg{The 13th \dccp@publ@long\ takes place on 19--22 February
56     2018 in Barcelona. URL: \url{http://www.dcc.ac.uk/events/idcc18/}}
57   \def\dccp@subject{13th \dccp@publ@long, 2018}
58 }
59 \ProcessOptions\relax

```

The `demo` option, if passed, would be passed on to the `graphics` package wreaking havoc with each and every included image. To avoid this, we clear it from the list of class options using code from Enrico Gregorio.

```

61 \def\@clearglobaloption#1{%
62   \def\@tempa{#1}%
63   \def\@tempb{\@gobble}%
64   \@for\next:=\@classoptionslist\do{%
65     \ifx\next\@tempa
66       \message{Option \next\space has been hidden from subsequent packages}%
67     \else
68       \edef\@tempb{\@tempb,\next}%
69     \fi
70   }%
71   \let\@classoptionslist\@tempb
72   \expandafter\ifx\@tempb\@gobble
73     \let\@classoptionslist\@empty
74   \fi
75 }
76 \@clearglobaloption{demo}

```

The class is based on the `article` class, and uses A4 paper.

```

78 \LoadClass[a4paper,12pt,twoside]{article}

```

The rest of the formatting happens in the following file.

```

80 \usepackage{dccpaper-base}

```

dccpaper-base.sty

The `dccpaper` classes are deliberately very similar. This package contains the common code.

We use British English orthography.

```
21 \RequirePackage[british]{babel}
```

The macro patching commands from `etoolbox` come in useful for handling author and date information, and also for compatibility with `apacite`.

```
22 \RequirePackage{etoolbox}
```

The `dccpaper` classes use Times as the main text font. We prefer `newtx` as it provides support for mathematics, but the standard `times` package will do. In case they are needed, we also provide Helvetica for the sans serif font and Computer Modern Teletype for the monospaced.

```
23 \RequirePackage[T1]{fontenc}
24 \IfFileExists{newtxtext.sty}%
25   {\RequirePackage{newtxtext,newtxmath}}%
26   {\RequirePackage{times}}
27 \RequirePackage[scaled=0.92]{helvet}
28 \renewcommand{\ttdefault}{cmtt}
```

We will need support for included graphics and colour. The structural elements are a medium turquoise, while the links are slightly darker to make them easier to read on screen.

```
29 \RequirePackage{graphicx}
30 \IfFileExists{xcolor.sty}%
31   {\RequirePackage{xcolor}}%
32   {\RequirePackage{color}}
33 \definecolor[named]{struct}{rgb}{0,0.5,0.5}
34 \definecolor[named]{links}{rgb}{0,0.4,0.4}
```

We will calculate some lengths later.

```
35 \RequirePackage{calc}
```

Ragged right text is easier to read on screen, but fully justified text looks better. The `\raggedyright` layout from Peter Wilson's `memoir` class (2005/09/25 v1.618) is an excellent compromise. The code below replicates it.

First we save the original definitions of `\` and `\parindent` as `\OrigLineBreak` and `\RaggedParindent` respectively.

```
37 \let\OrigLineBreak\
38 \newdimen\RaggedParindent
39 \setlength{\RaggedParindent}{\parindent}
```

The `\raggedyright` layout more or less lays text out as with full justification, but then lets the shorter lines relax a bit from the right margin. It is the default for DCC papers.

```

41 \newcommand{\raggedyright}[1][2em]{%
42   \let\\@centercr\@rightskip \z@ \@plus #1\relax
43   \rightskip\@rightskip
44   \leftskip\z@skip
45   \parindent\RaggedParindent}
46 \AtBeginDocument{\raggedyright}

```

The `\flushleftright` layout restores full justification, in case it is needed.

```

48 \newcommand*{\flushleftright}{%
49   \let\\OrigLineBreak
50   \leftskip\z@skip
51   \rightskip\leftskip
52   \parfillskip\@flushglue
53   \everypar{}}

```

Pd \TeX 1.40.15 introduced the facility to include dummy interword spaces to improve text extraction and reflow. We test for this facility and use it if available.

```

55 \RequirePackage{ifpdf}
56 \ifpdf
57   \ifdef{\pdfinterwordspaceon}{\pdfinterwordspaceon}{}
58 \fi

```

The classes have some special metadata requirements. We start with the author information.

The macro `\thecorrespondence` is used in the title page footer for the name, postal address and email address of the corresponding author.

```

60 \def\thecorrespondence{}
61 \newcommand*{\correspondence}[1]{\def\thecorrespondence{#1}}

```

The handling of authors here is inspired by Patrick W Daly's `authblk`, (2001/02/27 1.3), and defines the familiar user commands. Authors are presented in blocks, one affiliation but perhaps several authors per block.

We make the presentation of the author information configurable (just in case) with some hooks and lengths:

- `\Authfont` is the font used for author names;
- `\Affilfont` is the font used for affiliations;
- `\affilsep` is the line spacing between author names and affiliations;
- `\authblksep` is the line spacing between author name/affiliation blocks.

```

62 \newcommand*{\Authfont}{\normalfont}
63 \newcommand*{\Affilfont}{\normalfont\small}
64 \newlength{\affilsep}\setlength{\affilsep}{0pt}
65 \newlength{\authblksep}\setlength{\authblksep}{1.5\baselineskip}

```

The `\AuthorBlock` command will be used to collect all the author information.

```

66 \newcommand{\AuthorBlock}{}

```

The `\MainAuthor` command collects abbreviated author information for use in the headers.

```

67 \newcommand{\MainAuthor}{}

```

The `\dccp@author` command, meanwhile, collects a full list of authors for the PDF metadata.

```

68 \newcommand{\dccp@author}{}

```

We define counters for

- the total number of authors defined;
- the number of authors in the current block;
- the number of blocks defined.

```

69 \newcounter{authors}
70 \newcounter{authorsinblock}
71 \newcounter{block}

```

The block counter will increase once in the preamble, and again when the information is typeset, so we need to reset it at the beginning of the document.

```

72 \AtBeginDocument{\setcounter{block}{0}}

```

The new definition of the author command starts here.

```

73 \renewcommand{\author}[1]{%

```

If this is the first or second `\author` command, we add the name to our abbreviated list of authors. Otherwise, we replace the name of the second and subsequent authors with ‘et al.’ in that list.

At the same time, we use a simpler technique to populate `\dccp@author`.

```

74 \ifnum\theauthors=0
75 \def\dccp@author{#1}%
76 \def\MainAuthor{#1}%
77 \else
78 \appto\dccp@author{, #1}%
79 \ifnum\theauthors=1%
80 \def\OtherMainAuthors{ and #1}%
81 \appto\MainAuthor{\OtherMainAuthors}%
82 \else
83 \ifnum\theauthors=2%
84 \def\OtherMainAuthors{ et al.}%
85 \fi
86 \fi
87 \fi
88 \stepcounter{authors}%

```

Each block has its author names collected in a macro like `\blocki@auth`, and its affiliation collected in a macro like `\blocki@affil` (the ‘i’ is a serial number).

If this is the first author in a block, we need to create the block and add it to `\AuthorBlock`; second and subsequent blocks are preceded by a `\quad` of space.

```

89 \ifnum\theauthorsinblock=0%
90 \stepcounter{block}%
91 \expandafter\def\csname block\roman{block}@auth\endcsname{\Authfont#1}%
92 \ifnum\theblock>1\appto\AuthorBlock{\quad}\fi
93 \appto\AuthorBlock{%
94 \stepcounter{block}%
95 \begin{minipage}[t]{0.45\textwidth}\centering
96 \csname block\roman{block}@auth\endcsname
97 \ifx\undefined\csname block\roman{block}@affil\endcsname
98 \else
99 \\\[affilsep]\csname block\roman{block}@affil\endcsname
100 \fi
101 \end{minipage}%
102 \rule{0pt}{2\baselineskip}%
103 }
104 \else

```

Otherwise we just add the name to the right `\blocki@auth`-style macro.

```

105 \csappto{block\roman{block}@auth}{, #1}%
106 \fi
107 \stepcounter{authorsinblock}%
108 }

```

The `\affil` command adds an affiliation to the current block and closes it by resetting the `authorsinblock` counter.

```

109 \newcommand{\affil}[1]{%
110 \expandafter\def\csname block\roman{block}@affil\endcsname{\Affilfont#1}%
111 \setcounter{authorsinblock}{0}%
112 }

```

The `\HeadTitle` collects the abbreviated title for use in the headers.

```
114 \newcommand*{\HeadTitle}{}

```

We wrap the normal `\title` command with code to populate `\HeadTitle` with the optional argument if provided, or the mandatory one otherwise. We also provide a persistent `\thetitle` macro, stripped of any `\thanks`.

```
115 \let\ProperTitle=\title
116 \renewcommand{\title}[2][\empty]{
117   \ifx\empty #1%
118     \renewcommand*{\HeadTitle}{#2}%
119   \else
120     \renewcommand*{\HeadTitle}{#1}%
121   \fi%
122   \begingroup\let\footnote\@gobble
123   \ProperTitle{#2}%
124   \begingroup
125     \renewcommand{\thanks}[1]{}
126     \protected@xdef\thetitle{#2}
127   \endgroup\endgroup
128 }

```

To prevent L^AT_EX throwing an error if no title is supplied, we supply a fallback value and issue a warning instead.

```
129 \def\thetitle{%
130   Please supply a title
131   \ClassWarning{dccpaper}{%
132     Please supply a title in the preamble with \noexpand\title{}%
133   }
134 }

```

We make `\thedata` persistent, borrowing the technique used in Peter Wilson’s `memoir` class (2005/09/25 v1.618).

```
136 \pretocmd{\date}{\begingroup\let\footnote\@gobble}{\}{\}%
137 \apptocmd{\date}{%
138   \begingroup
139     \renewcommand{\thanks}[1]{}
140     \protected@xdef\thedata{#1}
141   \endgroup\endgroup%
142 }{\}{\}

```

We ensure `\thedata` is defined using a dummy date.

```
143 \date{20xx}

```

IJDC articles have extra bibliographic information:

- `\volume` sets the volume number, `\thevolume`;

- `\issue` sets the issue number, `\theissue`;
- `\subno` sets the submission number, `\thesubno`.

These numbers are used to build the DOI, `\thedoi`.

```

145 \newcommand*{\thevolume}{0}
146 \newcommand*{\volume}[1]{\renewcommand*{\thevolume}{#1}}
147 \newcommand*{\theissue}{0}
148 \newcommand*{\issue}[1]{\renewcommand*{\theissue}{#1}}
149 \newcommand*{\thesubno}{0}
150 \newcommand*{\subno}[1]{\renewcommand*{\thesubno}{#1}}
151 \newcommand*{\thedoi}{10.2218/ijdc.v\thevolume i\theissue .\thesubno}

```

They also display the page range. The following code was borrowed from Peter Wilson's `memoir` class (2005/09/25 v1.618). It defines a counter `lastpage` which, on the second run, will contain the number of the last page.

```

152 \newcounter{lastpage}
153 \setcounter{lastpage}{0}
154 \newcommand{\dol@stpage}{%
155   \if@filesw
156     \addtocounter{page}{-1}%
157     \immediate\write\@auxout%
158       {\string\setcounter{lastpage}{\the\c@page}}%
159     \stepcounter{page}%
160   \fi
161 }
162 \AtBeginDocument{\AtEndDocument{\clearpage\dol@stpage}}

```

DCC papers display some important dates. We collect these in `\dccp@dates`, initially setting the value to something sensible for papers in draft.

```

164 \def\dccp@dates{\emph{Draft from} \today}

```

Several types of date can be added:

- `\submitted` for when the authors submitted the paper (intended for IDCC papers).
- `\received` for when the paper was received by the editorial board (intended for IJDC papers).
- `\revised` for when the most recent version was received by the editorial board.
- `\accepted` for when the paper was accepted by the editorial board.

```

165 \newcommand*{\submitted}[1]{%
166   \def\dccp@dates{\emph{Submitted} #1}}
167 \newcommand*{\received}[1]{%
168   \def\dccp@dates{\emph{Received} #1}}
169 \newcommand*{\revised}[1]{%
170   \appto\dccp@dates{

```

```

171 \space\space\space\textbar\space\space\space
172 \emph{Revision received} #1}%
173 }
174 \newcommand*{\accepted}[1]{%
175 \appto\dccp@dates{%
176 \space\space\space\textbar\space\space\space
177 \emph{Accepted} #1}%
178 }

```

IJDC papers need to say if they had a previous life as a conference paper. This statement goes in `\dccp@conf`, which is initially empty. The user command for setting this text is `\conference`.

```

179 \let\dccp@conf=\empty
180 \newcommand*{\conference}[1]{%
181 \renewcommand*{\dccp@conf}{An earlier version of this paper was presented at #1.
182 }%
182 }

```

The macro `\FixTextHeight` will be useful when switching from the first page geometry to the regular geometry for the rest of the paper. It is based on code from Hideo Umeki's `geometry` package (2002/07/08 v3.2).

```

184 \newcommand{\FixTextHeight}{%
185 \setlength\@tempdima{\textheight}%
186 \addtolength\@tempdima{-\topskip}%
187 \@tempcnta\@tempdima
188 \@tempcntb\baselineskip
189 \divide\@tempcnta\@tempcntb
190 \setlength\@tempdimb{\baselineskip}%
191 \multiply\@tempdimb\@tempcnta
192 \advance\@tempdima-\@tempdimb
193 \global\advance\footskip\@tempdima
194 \multiply\@tempdima\tw@
195 \ifdim\@tempdima>\baselineskip
196 \addtolength\@tempdimb{\baselineskip}%
197 \global\advance\footskip-\baselineskip
198 \fi
199 \addtolength\@tempdimb{\topskip}%
200 \global\textheight\@tempdimb
201 }

```

The width of the textblock (on all pages) is 150mm, which on A4 paper implies margins of 30mm each. (Making both horizontal margins the same in a two-sided context makes the paper more pleasant to read on screen).

```

203 \setlength{\textwidth}{150mm}
204 \setlength{\oddsidemargin}{30mm - \hoffset - 1in}
205 \setlength{\evensidemargin}{30mm - \hoffset - 1in}

```

It is rare to have marginal notes, but in case we ever do, we centre them in the margin.

```
206 \setlength{\marginparwidth}{30mm - 2\marginparsep}
```

We also want a distance of 15mm from the top of the page to the top of the header, and two blank lines between the bottom of the header and the top of the textblock.

```
207 \setlength{\topmargin}{15mm - \voffset - 1in}
208 \setlength{\headsep}{2\baselineskip}
```

IJDC editorials have slightly different headers and footers. This requires testing for `\dccp@editorial` if it exists. In case it doesn't, we provide it.

```
210 \providecommand{\dccp@editorial}{Editorial}
```

The height of the footer can vary a lot. To keep it a fixed distance from the bottom of the page rather than the top, we need to vary the `\textheight` accordingly. This means we need to measure the height of the footer. (The header is more predictable but we may as well measure it while we are at it).

Here we define the header and footer of the title page (i.e. the `title` page style), making sure we save them to auxiliary macros `\TitleHead` and `\TitleFoot` so we can measure them.

```
211 \def\ps@title{%

We need to wait until the author has supplied the necessary information before we can do our measuring and set the remainder of the geometry, so we do it at the end of the preamble. First we put our saved macros into boxes we can measure (i.e. `\dccp@firstpagehead`, `\dccp@firstpagefoot`, `\dccp@restpagehead`, `\dccp@restpagefoot`).

```

309 \AtEndPreamble{
310     \newsavebox{\dccp@firstpagehead}
311     \sbox\dccp@firstpagehead{\normalfont\TitleHead}
312     \newsavebox{\dccp@firstpagefoot}
313     \sbox\dccp@firstpagefoot{\normalfont
314         \def\email#1{#1}\def\url#1{#1}\def\href#1#2{#2}\TitleFoot}
315     \newsavebox{\dccp@restpagehead}
316     \sbox\dccp@restpagehead{\normalfont\NormalHead}
317     \newsavebox{\dccp@restpagefoot}
318     \sbox\dccp@restpagefoot{\normalfont\NormalFoot}

```

We can now set the geometry of the title page. . .

```

319 \setlength{\headheight}{\ht\dccp@firstpagehead + \dp\dccp@firstpagehead}
320 \setlength{\footskip}{%
321     2\baselineskip + \ht\dccp@firstpagefoot + \dp\dccp@firstpagefoot
322 }
323 \setlength{\textheight}{%
324     \paperheight
325     - 30mm % 15mm top and bottom
326     - \headheight
327     - \headsep
328     - \footskip
329 }

```

... and provide a macro that will reset the geometry for the remaining pages.

```

330 \def\dccp@resetgeometry{%
331   \setlength{\headheight}{\ht\dccp@restpagehead + \dp\dccp@restpagehead}
332   \global\headheight=\headheight
333   \setlength{\footskip}{%
334     2\baselineskip + \ht\dccp@restpagefoot
335   }
336   \global\footskip=\footskip
337   \setlength{\textheight}{%
338     \paperheight
339     - 30mm % 15mm top and bottom
340     - \headheight
341     - \headsep
342     - \footskip
343   }
344   \FixTextHeight
345   \global\textheight=\textheight
346 }
347 }

```

The `\maketitle` command is redefined to the correct formatting. At the end it sets a hook that will reset the geometry when the first page is shipped out, i.e. with effect from the second page. It is here rather than at the end of the abstract in case the abstract itself spills over to the second page.

```

349 \RequirePackage{atbegshi}
350 \renewcommand{\maketitle}{%
351   \null\nobreak\vspace*{-0.528\baselineskip}%
352   \begingroup
353     \centering
354     {\Large\thetitle\par}
355     \vspace{0.7\baselineskip}
356     \AuthorBlock\par
357     \vspace{1.7\baselineskip}
358   \endgroup
359   \AtBeginShipoutNext{\dccp@resetgeometry}%
360 }

```

The `abstract` environment is redefined in terms of an environment `widequote`, which mimics the `quote` environment, but is a bit wider. We also provide a hook, `\afterabstract`, so that if some annotation needs to be appended to the title page after the abstract, we can do that.

```

362 \newenvironment{widequote}{%
363   \list{}{%
364     \setlength{\rightmargin}{2\parindent}%
365     \setlength{\leftmargin}{2\parindent}%
366   }%
367   \flushletright\item[]%
368 }{%
369   \endlist
370 }

```

```

371 \def\afterabstract{}
372 \renewenvironment{abstract}{%
373   \vskip1em%
374   \begin{center}%
375     {\bfseries\abstractname\vspace{-.5em}\vspace{\z@}}%
376   \end{center}%
377   \widequote\footnotesize
378 }{%
379   \endwidequote\afterabstract\newpage
380 }

```

We use the `titlesec` package to give headings the correct formatting. The settings below try to space out headings so they occupy an integer number of normal lines (an attempt at grid typesetting). They are a little complicated because we want it to work even if the heading appears at the top of the page.

```

382 \RequirePackage{titlesec}
383 \titlespacing*{\section}{0pt}{0pt}{\baselineskip}
384 \titlespacing*{\subsection}{0pt}{0pt}{0.6\baselineskip}
385 \titlespacing{\subsubsection}{\parindent}{\baselineskip}{0pt}
386 \titlespacing{\paragraph}{\parindent}{\baselineskip}{0pt}
387 \titlespacing{\subparagraph}{\parindent}{\baselineskip}{0pt}

```

An unfortunate side effect of spacing headings like this is that if a `\subsection` immediately follows a `\section` it forms an unsightly gap. To remedy this, we count how many paragraphs there have been since the last `\section`. Note that as we do not normally number the sections, an automatic reset of the `sectionpars` counter within the section counter won't work.

```

388 \newcounter{sectionpars}
389 \let\dccp@old@ep\everypar
390 \newtoks\everypar
391 \dccp@old@ep{\the\everypar\stepcounter{sectionpars}}

```

We need to manually reset `sectionpars` when `\section` is called. Also, the normal font size is 12pt/14.5pt, while `\Large` is 17pt/22pt; so the `\Large` line height = 1.5172 × normal line height. Nevertheless it seems to work better if we let the heading eat 0.528`\baselineskip` into the 2`\baselineskip` of padding above it.

```

392 \titleformat{\section}
393   [block]
394   {%
395     \vspace{2\baselineskip}%
396     \nobreak
397     \vspace*{-0.528\baselineskip}%
398     \setcounter{sectionpars}{0}%
399     \filcenter\normalfont\Large\bfseries
400   }
401   {\thesection}
402   {1em}
403   {}

```

The others use a `\normalsize` font so that makes life easier. The format for `\subsection` command includes conditional spacing: if the `sectionpars` counter equals 2, this means the heading immediately follows a `\section`, so less white space is needed.

```

404 \titleformat{\subsection}
405   {%
406     \ifnum\thesectionpars>2%
407       \vspace{2\baselineskip}%
408     \else
409       \vspace{\baselineskip}%
410     \fi\nobreak
411     \vspace*{-0.6\baselineskip}%
412     \normalfont\normalsize\bfseries
413   }
414   {\thesubsection}
415   {1em}
416   {}
417 \titleformat{\subsubsection}
418   [block]

```

DCC papers do not typically number their sections.

```

435 \setcounter{secnumdepth}{0}

```

To help with the display of tables we load the `array` and `booktabs` packages. As we don't like lines between rows in the table body, we stretch them out a bit so that white space does the job instead.

```

437 \RequirePackage{array,booktabs}
438 \renewcommand{\arraystretch}{1.25}

```

We use the `caption` package to give captions the right format.

```

440 \RequirePackage
441   [ format=hang
442     , labelsep=period
443     , font=small

```

```

444 , labelfont=bf
445 , figureposition=bottom
446 , tableposition=top
447 ]{caption}

```

Footnotes should be set right up against the left margin. They should be set hung and in the same half-ragged style as the main text. They should also, for neatness, be at the bottom of the page regardless of how short it is. The `footmisc` package helps here.

```

449 \RequirePackage[hang,bottom]{footmisc}
450 \settowidth{\footnotemargin}{\footnotesize\textsuperscript{99}\space}
451 \renewcommand{\footnotelayout}{\raggedyright}

```

Also, if multiple footnotes are set at once, the markers should be separated with superscript commas. The `footmisc` package should help here but its solution is clobbered by `hyperref`. So after a footnote is set, we check to see if the next token is also a footnote, and if so, slip a comma in before it.³ This tweak needs to be done late, `\AtBeginDocument`. Note that the `newtx` superior figures are a bit lower than normal superscript text.

```

452 \AtBeginDocument{
453   \let\dccp@footnote\footnote
454   \def\dccp@next@token{\relax}%
455   \def\dccp@supercomma{\textsuperscript{,}}%
456   \IfFileExists{newtxtext.sty}%
457     {\def\dccp@supercomma{\raisebox{-0.2ex}{\textsuperscript{,}}}}%
458   {}
459
460   \newcommand\dccp@check@for@footnote{%
461     \ifx\footnote\dccp@next@token
462       \dccp@supercomma
463     \fi
464   }
465
466   \renewcommand\footnote[1]{%
467     \dccp@footnote{#1}%
468     \futurelet\dccp@next@token\dccp@check@for@footnote
469   }
470 }

```

By default lists are quite loose. These settings help to tighten them.

```

472 \topsep = \z@
473 \partopsep = \z@
474 \appto{\enumerate}{\itemsep = 0.5ex plus 0.25ex minus 0.25ex}
475 \appto{\itemize}{\itemsep = 0.5ex plus 0.25ex minus 0.25ex}

```

A DCC paper should either be using `biblatex` or `apacite` for references.

If `biblatex` is used, we need to ensure that the reference list heading is a normal section rather than a starred one so it appears in the PDF bookmarks.

³ This solution was provided at <http://tex.stackexchange.com/q/40072>

```

477 \AtBeginDocument{
478   \@ifpackageloaded{biblatex}{%
479     \defbibheading{bibliography}[\refname]{\section{#1}}%

```

We also move the ‘doi:’ portion of a DOI inside the hyperlink.

```

480 \DeclareFieldFormat{doi}{%
481   \ifhyperref{%
482     \href{http://dx.doi.org/#1}{\nolinkurl{doi:#1}}%
483   }{%
484     \nolinkurl{doi:#1}%
485   }%
486 }
487 }%

```

If `apacite` is used, there are a few other adaptations we need to make.

```

488 \@ifpackageloaded{apacite}{%

```

With `hyperref` loaded, `apacite` makes the whole of a citation a link to the reference list item. We patch `\@ifauthorsunequalc@de` so only the year portion gets linked.

```

489 \def\@ifauthorsunequalc@de#1{%

512   \fi
513   \let\BBA\relax
514 }

```

The Spanish language support file defines a different version of `\@ifauthorsunequalc@de`, which might override the patch we have just introduced. So we employ the same test that `apacite` uses when deciding whether to load that file; if successful, we patch the Spanish

version. Note that as `apacite` loads language support files `\AtBeginDocument`, we have to do our thing after that, `\AfterEndPreamble`.

(Note that as we set the language to British English earlier, this should never be needed, but we try to be resilient to tinkering!)

```

515 \AfterEndPreamble{%
516   \@ifundefined{iflanguage}{%
517     \relax
518   }{%

```

Another thing `apacite` does `\AtBeginDocument` is set the URL style to monospaced. So we reset it back to normal roman type `\AfterEndPreamble`.

```

559   \urlstyle{APACrm}
560 }%

```

We pre-empt `apacite`'s `\providecommand` of `\doi` with our own definition that includes the 'doi' URI scheme label in the link, remembering to remove the one inserted by `\doiprefix`.

```
561 \newcommand{\doi}[1]{\href{http://dx.doi.org/#1}{\nolinkurl{doi:#1}}}%
562 \renewcommand{\doiprefix}{\unskip}%
563 }{}%
564 }
```

Both `biblatex` and `apacite` use `\bibitemsep` for the space between bibliography items. Just in case they haven't been loaded, though, we protect our setting of that length with an `\ifx` test.

```
565 \ifx\undefined\bibitemsep
566 \else
567 \setlength{\bibitemsep}{1em plus 1ex minus 1ex}%
568 \fi
569 }
```

As mentioned above, if `apacite` is used, we can use a package option to ensure that the reference list heading appears in the PDF bookmarks.

```
570 \PassOptionsToPackage{numberedbib}{apacite}
```

We, of course, use `hyperref` for enhancing the PDF with working links, bookmarks, metadata, etc.

```
572 \usepackage
573 [ colorlinks=true
574 , linkcolor=black
575 , anchorcolor=black
576 , citecolor=links
577 , filecolor=black
578 , menucolor=black
579 , runcolor=black
580 , urlcolor=links
581 ]{hyperref}
```

Links should be in roman type, not monospaced.

```
582 \urlstyle{rm}
```

We provide an `\email` command for displaying the email address of the corresponding author.

```
583 \newcommand*{\email}[1]{\href{mailto:#1}{#1}}
```

Once the user has had a chance to provide the metadata, we can add it to the PDF metadata.

```

584 \AtBeginDocument{%
585   \hypersetup
586     { pdftitle={\thetitle}
587       , pdfauthor={\dccp@author}
588       , pdfsubject={\dccp@subject}
589     }

```

The APA has its own style for line breaks in URLs. The [apacite](#) package provides the code for this, but in case [biblatex](#) is used instead, we repeat the settings (from 2013/07/21 v6.03) here.

```

```

We now embed the Creative Commons licence information in the PDF using an XMP packet. To do this, we employ the same technique as Scott Pakin's [hyperxmp](#) (2014/01/02 v2.4). In order to avoid a bug whereby Adobe Acrobat confuses the XMP author information and the regular author information, though, we *only* embed the licence information.

We need to make sure that any characters to appear verbatim in the XMP packet are treated as ordinary characters and not active ones. The likely active characters are symbols and punctuation, so should be treated as 'other' (category 12).

```

615 \begingroup
616 \catcode'\="12
617 \catcode'\&=12
618 \catcode'\#=12
619 \catcode'\<=12
620 \catcode'\>=12
621 \catcode'\_ =12

```

We construct the XMP packet as the document begins.

```
622 \AtBeginDocument{%
```

For convenience we define `\sp` to be a level of indent, translating to three spaces.

```
623 \def\sp{\space\space\space}
```

The text of the XMP packet is recorded in `\cc@xmp@packet`. We use `^^J` to break lines.

```
624 \long\gdef\cc@xmp@packet{%
625 <?xpacket begin='' id=''?'>^^J%

648 }
649 \endgroup
```

Different workflows require the XMP packet to be embedded in different ways.

Pd_TE_X can inject objects into PDFs natively.

```
650 \newcommand*{\ccxmp@embed@packet@pdftex}{%
651 \bgroup
652 \pdfcompresslevel=0
653 \immediate\pdfobj stream attr {%
654 /Type /Metadata
655 /Subtype /XML
656 }{\cc@xmp@packet}%
657 \pdfcatalog {/Metadata \the\pdflastobj\space 0 R}%
658 \egroup
659 }
```

The `\pdfmark` command defined by `hyperref` is respected by tools such as Dvipdf, Dvips, Dvipsone, etc.

```

660 \newcommand*{\ccxmp@embed@packet@pdfmark}{%
661   \pdfmark{%
662     pdfmark=/NamespacePush
663   }%
664   \pdfmark{%
665     pdfmark=/OBJ,
666     Raw={/_objdef \string{ccxmp@packet\string} /type /stream}%
667   }%
668   \pdfmark{%
669     pdfmark=/PUT,
670     Raw={\string{ccxmp@packet\string}
671       2 dict begin
672         /Type /Metadata def
673         /Subtype /XML def
674         currentdict
675       end
676     }%
677   }%
678   \pdfmark{%
679     pdfmark=/PUT,
680     Raw={\string{ccxmp@packet\string} (\ccxmp@packet)}%
681   }%
682   \pdfmark{%
683     pdfmark=/Metadata,
684     Raw={\string{Catalog\string} \string{ccxmp@packet\string}}%
685   }%
686   \pdfmark{%
687     pdfmark=/NamespacePop
688   }%
689 }

```

Dvipdfm has its own `\special` command for inserting PDF objects, but it is a bit basic and requires advance knowledge of how long (in characters) the object is.

The `\ccxmp@count@spaces` macro counts the number of spaces in its parameter through a process of iteration, adding this figure to `\@tempcnta`.

```

690 \def\ccxmp@count@spaces#1 {%
691   \def\ccxmp@one@token{#1}%
692   \ifx\ccxmp@one@token\@empty
693     \advance\@tempcnta by -1
694   \else
695     \advance\@tempcnta by 1
696     \expandafter\ccxmp@count@spaces
697   \fi
698 }

```

The `\ccxmp@count@non@spaces` command counts the number of non-spaces in its argument through a process of iteration, adding this figure to `\@tempcnta`.

```

699 \newcommand*{\ccxmp@count@non@spaces}[1]{%

```

```

700 \def\ccxmp@one@token{#1}%
701 \ifx\ccxmp@one@token\@empty
702 \else
703   \advance\@tempcnta by 1
704   \expandafter\ccxmp@count@non@spaces
705 \fi
706 }

```

The `\ccxmp@string@len` command sets `\@tempcnta` to the number of characters (spaces + non-spaces) in its argument.

```

707 \newcommand*{\ccxmp@string@len}[1]{%
708   \@tempcnta=0
709   \expandafter\ccxmp@count@spaces#1 {} %
710   \expandafter\ccxmp@count@non@spaces#1{}%
711 }

```

So now, finally, is the command for embedding the packet using Dvipdfm.

```

712 \newcommand*{\ccxmp@embed@packet@dvipdfm}{%
713   \ccxmp@string@len{\ccxmp@packet}%
714   \special{pdf: object @ccxmp@packet
715     <<
716       /Type /Metadata
717       /Subtype /XML
718       /Length \the\@tempcnta
719     >>
720     stream^^J\ccxmp@packet endstream%
721   }%
722   \special{pdf: docview
723     <<
724       /Metadata @ccxmp@packet
725     >>
726   }%
727 }

```

X_YTeX creates PDFs with Xdvipdfmx, which supports a simpler `\special` for inserting objects that does not require us to count characters.

```

728 \newcommand*{\ccxmp@embed@packet@xetex}{%
729   \special{pdf:stream @ccxmp@packet (\ccxmp@packet)
730     <<
731       /Type /Metadata
732       /Subtype /XML
733     >>
734   }%
735   \special{pdf:put @catalog
736     <<
737       /Metadata @ccxmp@packet
738     >>
739   }%
740 }

```

We rely on [hyperref](#) to tell us how the PDF will be generated (after all, it may not be done in the current pass) and use the respective technique to embed the XMP packet.

```

741 \AtBeginDocument{%
742   \begingroup
743   \def\ccxmp@driver{hpdftex}%

759     \fi
760   \fi
761 \endgroup
762 }
```

Appendix C: Installation

Managed way

The latest stable release of the dccpaper bundle has been packaged for TeX Live and MiKTeX. If you are running TeX Live and have `tlmgr` installed, you can install the bundle simply by running `tlmgr install dccpaper`. If you are running MiKTeX, you can install the bundle by running `mpm --install=dccpaper`. Both `tlmgr` and `mpm` have GUI versions that you might find friendlier.

Automated way

A makefile is provided which you can use with the Make utility:

- Running `make source` generates the derived files
 - `README.md`
 - `ijdc-v9.cls`
 - `idcc.cls`
 - `dccpaper-base.sty`
 - `dccpaper-apacite.bib`
 - `dccpaper-biblatex.bib`
- Running `make` generates the above files and also `dccpaper.pdf`.
- Running `make inst` installs the files in the user's TeX tree.
- Running `make install` installs the files in the local TeX tree.

Manual way

1. Run `tex dccpaper.dtx` to generate the source files.
2. Compile `dccpaper.dtx` with (any version of) LaTeX and Biber to generate the documentation. Due to a dependency on the markdown package, you will need either to use LuaLaTeX or to enable shell escape.
3. Move the files to your TeX tree as follows:
 - `source/latex/dccpaper`: `dccpaper.dtx`, `dccpaper.ins`
 - `tex/latex/dccpaper`: `ijdc-v9.cls`, `idcc.cls`, `dccpaper-base.sty`, `dccpaper-by.eps`, `dccpaper-by.pdf`
 - `doc/latex/dccpaper`: `dccpaper.pdf`, `dccpaper-apacite.bib`, `dccpaper-biblatex.bib`, `README.md`
4. You may then have to update your installation's file name database before TeX and friends can see the files.

Appendix D: Sample Document

The following code demonstrates how to use `dccpaper` to write a IDCC conference paper.

```
1 \documentclass[research,15]{idcc}
2
3 \title{How to write a conference paper}
4 \author{Alex Ball}
5 \affil{Digital Curation Centre}
6 \author{Fred Bloggs}
7 \affil{University of Life}
8
9 \submitted{1 October 2014}
